T.R.A. DOCKET ROOM  
August 16, 2005

VIA HAND DELIVERY

Hon. Ron Jones, Chairman  
Tennessee Regulatory Authority  
460 James Robertson Parkway  
Nashville, TN 37238

Re: *Petition to Establish Generic Docket to Consider Amendments to  
Interconnection Agreements Resulting from Changes of Law*  
Docket No. 04-00381

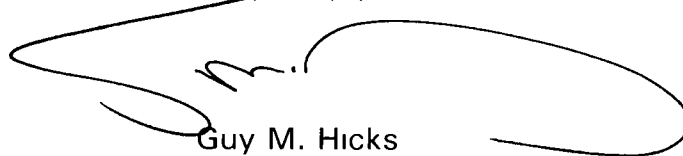

Dear Chairman Jones:

Enclosed are the original and four paper copies and a CD ROM of Rebuttal  
Testimony on behalf of BellSouth by the following witnesses:

Kathy Blake  
Eric Fogle  
Pamela Tipton

Copies are being provided to counsel of record.

Very truly yours,

Guy M. Hicks

GMH:ch

## CERTIFICATE OF SERVICE

I hereby certify that on August 16, 2005, a copy of the foregoing document was served on the following, via the method indicated:

Q PLEASE STATE YOUR NAME, YOUR POSITION WITH BELLSOUTH  
TELECOMMUNICATIONS, INC. ("BELLSOUTH"), AND YOUR  
BUSINESS ADDRESS.

A. My name is Eric Fogle. I am employed by BellSouth Resources, Inc., as a  
Director in BellSouth's Interconnection Operations Organization. My business  
address is 675 West Peachtree Street, Atlanta, Georgia 30375.

Q ARE YOU THE SAME ERIC FOGLE THAT FILED DIRECT TESTIMONY  
IN THIS DOCKET?

A Yes. I filed direct testimony on July 26, 2005.

Q WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. The purpose of my rebuttal testimony is to provide BellSouth's response to the  
testimony and proposed contract language contained in the direct testimony of  
Joseph Gillan on behalf of The Competitive Carriers of the South, Inc  
("CompSouth") for Issues 6, 17, 18, 19, 20, 23, 24, 25, 26, 27, and 28.

1 To the extent that the parties provided Interconnection Agreement ("ICA")  
2 language supporting their positions on the issues, BellSouth has provided an  
3 edited version of the parties' proposed ICA language, attached to Pam Tipton's  
4 rebuttal testimony as PAT-5. This exhibit is provided to illustrate the ICA  
5 language that is acceptable to BellSouth. I will explain BellSouth's redlines to  
6 the CLECs' language for the issues I address in this rebuttal testimony  
7

8 *Issue 6: Are HDSL-capable copper loops the equivalent of DS1 loops for the*  
9 *purpose of evaluating impairment?*  
10

11 Q. WHAT ARE THE DISAGREEMENTS BETWEEN THE PARTIES  
12 CONCERNING THIS ISSUE?  
13

14 A. There are two overall disagreements. First, the parties disagree about how to  
15 count HDSL lines for the purpose of evaluating impairment. Second, the  
16 parties disagree as to whether there should be continued access to HDSL  
17 capable loops in wire centers in which CLECs are not impaired and are not  
18 entitled to obtain UNE DS1 loops.  
19

20 Q. WITH RESPECT TO THE FIRST DISAGREEMENT, DID BELL SOUTH  
21 COUNT HDSL-CAPABLE LOOPS AS DS1 EQUIVALENTS FOR THE  
22 PURPOSE OF EVALUATING IMPAIRMENT?  
23

24 A. No. As I stated in my direct testimony, BellSouth counted Unbundled  
25 Network Element ("UNE") High-bit rate Digital Subscriber Loop ("HDSL")

1 capable copper loops on a one-for-one basis and did not convert each HDSL  
2 capable loop to voice grade equivalents. BellSouth elected to conservatively  
3 calculate deployed HDSL loops, although it would have been appropriate to  
4 convert deployed HDSL capable loops to voice grade equivalents. While Mr.  
5 Gillan expressed concerns about calculating HDSL capable loops, (Direct  
6 Testimony of Joseph Gillan, pp. 24 – 27) these concerns appear to be  
7 overstated.

8  
9 In any event, I understand the FCC to have contemplated that currently  
10 deployed HDSL loops would be counted as the equivalent of 24 business lines  
11 based upon statements made in the Triennial Review Order (“TRO”) that,  
12 “Carriers frequently use a form of DSL service, i.e., High-bit rate DSL  
13 (HDSL), both two-wire and four-wire HDSL, as the means for delivering T1  
14 services to customers. We will use DS1 for consistency but note that a DS1  
15 loop and a T1 are equivalent in speed and capacity, both representing the North  
16 American standard for a symmetric digital transmission link of 1 544 Mbps.”

17  
18 Because HDSL and DS1 loops are technically equivalent, and because the  
19 FCC clearly references the use of HDSL technology to deliver DS1 service, it  
20 is clearly appropriate to count currently-deployed HDSL loops delivering DS1  
21 level service as a 24-line equivalents. To avoid a dispute on this issue,  
22 however, BellSouth counted loops using HDSL technology as one (line)  
23 instead of 24 business lines in its nonimpairment analysis

24  
25 Q TURNING TO THE SECOND AREA OF DISAGREEMENT, WHY DOES

1 BELL SOUTH CONCLUDE THAT CLECS ARE NOT ENTITLED TO UNE  
2 HDSL LOOPS IN OFFICES WHERE NO IMPAIRMENT FOR DS1 LOOPS  
3 EXISTS?

4

5 A The FCC has defined DS1 loops to include 2-wire and 4-wire copper loops  
6 capable of providing DS1 service using HDSL technology, in its definition of  
7 DS1 loops (47 C.F.R. § 51.319(a)(4)). BellSouth has included the FCC's  
8 definition in its ICA language, which provides that "DS1 Loops include 2-wire  
9 and 4-wire copper Loops capable of providing high-bit rate digital subscriber  
10 line services, such as 2-wire and 4-wire HDSL Compatible Loops." (See PAT-  
11 1, Section 2.3.6.1) Based upon the FCC's definition, DS1 loop relief includes  
12 relief from the obligation to provide HDSL loops.

13

14 It is also useful to keep in mind that BellSouth is not attempting to restrict  
15 CLECs from using HDSL *technology*. In fact, the import of the FCC's Order  
16 is to encourage CLECs to deploy this technology on their own CLECs can  
17 order Unbundled Copper Loops ("UCLs") and loop make-up ("LMU") to  
18 determine if a specific loop meets their criteria for deploying HDSL-based  
19 DS1 service and continue to avail themselves of HDSL technology. However,  
20 without impairment, there is no reason to compel BellSouth to continue to  
21 provide a loop product that is simply an indicator of a pre-defined set of  
22 conditions suitable for supporting HDSL technology, as the CLECs can  
23 provide this capability on their own

24

25 Q WHAT WOULD BE THE IMPACT TO CLECS IF BELL SOUTH IS NOT

1 REQUIRED TO PROVIDE HDSL LOOPS IN CERTAIN OFFICES?

2

3 A. There would be minimal impact to CLECs. BellSouth's records indicated that  
4 in the entire state, BellSouth provides 426 UNE HDSL loops to all CLECs. By  
5 allowing CLECs to order UCLs instead of a UNE HDSL loop, the reality is  
6 that BellSouth is simply trying to follow the FCC's rules, which also has the  
7 result of simplifying BellSouth's ordering systems.

8

9 Q. WHAT ICA LANGUAGE DO THE CLECS PROPOSE WITH RESPECT TO  
10 HDSL LOOPS?

11

12 A. The CLECs propose ICA language that states "HDSL-capable loops are not the  
13 equivalent of DS1 loops for the purpose of counting business lines." (Gillan  
14 Exhibit JPG-1, p. 19) This language improperly creates a distinction between  
15 HDSL and DS1 loops, when such a distinction does not exist. BellSouth  
16 recommends that the Authority reject CompSouth's proposed language from  
17 any approved contract language that results from this proceeding.

18

19 *Issue 17: Is BellSouth obligated pursuant to the Telecommunications Act of 1996*  
20 *and FCC Orders to provide line sharing to new CLEC customers after October 1,*  
21 *2004?*

22

23 Q. PLEASE SUMMARIZE THE DISAGREEMENTS BETWEEN THE  
24 PARTIES.

25

1 A Even though the TRA has previously ruled on this matter in the Covad  
2 arbitration (Docket No. 04-00186) and the FCC has made clear in paragraphs  
3 199, 260, 261, 262, 264, and 265 of the *TRO* that BellSouth is not obligated to  
4 provide new line sharing arrangements after October 1, 2004, the CLECs  
5 propose ICA language (Gillan Attachment JPG-1, Section 2.11) that would  
6 obligate BellSouth to continue to provide access to line sharing as an  
7 unbundled network element. This language should be rejected in its entirety  
8

9 Q HAVE THE CLECS PROVIDED ANY EXPLANATION FOR THEIR LINE  
10 SHARING CONTRACT LANGUAGE?  
11

12 A No. Although Mr. Gillan has included contract language, he failed to include  
13 any discussion supporting that language, which is likely because this issue is  
14 more of a legal dispute, which both parties have briefed. For more information  
15 on this issue, I refer the Authority to BellSouth's summary judgment briefs.  
16

17 *Issue 18: If the answer to the foregoing issue is negative, what is the appropriate*  
18 *language for transitioning off a CLEC's existing line sharing arrangements?*  
19

20 Q. WHAT IS THE DISAGREEMENT BETWEEN THE PARTIES  
21 CONCERNING THIS ISSUE?  
22

23 A. The CLECs' proposed contract language does not include the FCC's transition  
24 plan. The CLECs' omission is clear when the language at my direct exhibit  
25 EF-1 at 3 1.2 is compared with Mr Gillan's proposed language at JPG-1,

1 Section 3.1.3. Consistent with its ruling in the Covad arbitration endorsing the  
2 FCC's transition plan, the Authority should simply reject the CompSouth  
3 language and adopt BellSouth's transition language (provided in my direct  
4 testimony as Exhibit EF-1), which includes the FCC's transition plan  
5 BellSouth's proposed language also requires CLECs that have ordered line  
6 sharing arrangements after October 1, 2004 to pay the full loop rate for those  
7 arrangements. CompSouth's proposed language omits such a requirement.

8  
9 *Issue 19: What is the appropriate ICA language to implement BellSouth's*  
10 *obligations with regard to line splitting?*

11  
12 Q. PLEASE SUMMARIZE THE DISAGREEMENTS BETWEEN THE  
13 PARTIES

14  
15 A. Based on the ICA language proposed by Joseph Gillan (Exhibit JPG-1, Section  
16 3), the parties' disagreement centers on the types of loops that should be  
17 included with line splitting, and who should provide the splitter.

18  
19 Q. DOES THE ADDITIONAL LOOP TYPE INTRODUCED BY COMPSOUTH  
20 REQUIRE LINE SPLITTING?

21  
22 A. No. BellSouth's contract language (Section 3 in Attachment 2) provides for  
23 line splitting over Unbundled Network Element-Loop ("UNE-L"), and, for a  
24 limited time, with Unbundled Network Element-Platform ("UNE-P")  
25 arrangements. The proposed CompSouth ICA language attempts to require

1 line splitting on a commingled arrangement of a loop and unbundled local  
2 switching pursuant to section 271. The loop described by CompSouth does  
3 not exist, is not required by the FCC, and, therefore, should not be included in  
4 the section of the ICA that addresses line splitting.

5  
6 Q. WHAT DISAGREEMENT EXISTS CONCERNING SPLITTERS?

7  
8 A. It appears that the CLECs propose that BellSouth be obligated to provide  
9 splitters between the data and voice CLECs that are splitting a UNE-L. As I  
10 stated in my direct testimony, splitter functionality can easily be provided by  
11 either an inexpensive stand-alone splitter or by utilizing the integrated splitter  
12 built into all Asynchronous Digital Subscriber Line ("ADSL") platforms.  
13 Clearly, BellSouth should not be obligated to provide the CLECs with splitters  
14 when they are utilizing UNE-L and can readily provide this function for  
15 themselves.

16  
17 *Issue 20: SUB-LOOP CONCENTRATION: a) What is the appropriate ICA*  
18 *language, if any, to address sub loop feeder or sub loop concentration? b) Do the*  
19 *FCC's rules for sub loops for multi-unit premises limit CLEC access to copper*  
20 *facilities only or do they also include access to fiber facilities? c) What are the*  
21 *suitable points of access for sub-loops for multi-unit premises?*

22  
23 Q. HAVE THE CLECS PROVIDED ANY DIRECT TESTIMONY ON THIS  
24 ISSUE?

1 A. No. It is obvious that there is no disagreement between the parties, since the  
2 CLECs unanimously decided not to provide any direct testimony or proposed  
3 ICA language that differs from BellSouth's. Based on this apparent lack of  
4 disagreement, this Authority should accept BellSouth's proposed ICA  
5 language in its entirety.

6

7 *Issue 23: (a) What is the appropriate definition of minimum point of entry*  
8 *("MPOE")? (b) What is the appropriate language to implement BellSouth's*  
9 *obligation, if any, to offer unbundled access to newly-deployed or 'greenfield' fiber*  
10 *loops, including fiber loops deployed to the MPOE of a multiple dwelling unit that is*  
11 *predominantly residential, and what, if any, impact does the ownership of the inside*  
12 *wiring from the MPOE to each end user have on this obligation?*

13

14 *Issue 24: What is the appropriate ICA language to implement BellSouth's*  
15 *obligation to provide unbundled access to hybrid loops?*

16

17 *Item 28: What is the appropriate language, if any, to address access to overbuild*  
18 *deployments of fiber to the home and fiber to the curb facilities?*

19

20 Q. DID THE CLECS PROVIDE ANY DIRECT TESTIMONY ON THESE  
21 ISSUES?

22

23 A No

24

25 Q DOES BELL SOUTH AGREE WITH ANY OF THE CLECS' PROPOSED

1 ICA LANGUAGE?

2

3 A. Yes. BellSouth agrees with the CLECs' proposed language for access to  
4 FTTH and FTTC (Gillan Exhibit JPG-1, Paragraphs 2.1.2, 2.1.2.1, and  
5 2.1.2.2).

6

7 Q DOES BELL SOUTH HAVE CONCERNS WITH THE PROPOSED ICA  
8 LANGUAGE PROVIDED BY COMPSOUTH?

9

10 A. Yes. CompSouth omitted paragraph 2.1.2.3 which addresses availability to  
11 copper facilities in overbuild areas. With regard to hybrid loops, BellSouth  
12 disagrees with the additional language provided by CompSouth that attempts  
13 to create an obligation for access to hybrid loops, even if there is no  
14 impairment. Specifically, in paragraph 2.1.3, CompSouth proposes, "Where  
15 impairment does not exist, BellSouth shall provide such hybrid loop at just and  
16 reasonable rates pursuant to Section 271. " This language is not appropriate  
17 because, as set forth in its briefs, BellSouth has no obligation to include  
18 Section 271 obligations in interconnection agreements entered into under  
19 Section 251 and 252 of the Act

20

21 *Issue 25: Under the FCC's definition of a loop found in 47 C.F.R. §51.319(a), is a*  
22 *mobile switching center or cell site an "end user customer's premises"?*

23

24 Q DID THE CLECS PROVIDE ANY DIRECT TESTIMONY ON THIS  
25 ISSUE?

1 A. No.

2

3 Q. WHAT ICA LANGUAGE DO THE CLECS PROPOSE?

4

5 A. The CLECs have included language at JPG-1, page 52 BellSouth does not

6 object to the CLECs' proposed language

7

8 *Issue 26: What is the appropriate ICA language to implement BellSouth's*

9 *obligation to provide routine network modifications?*

10

11 Q. PLEASE SUMMARIZE THE DISAGREEMENTS BETWEEN THE

12 PARTIES.

13

14 A. The parties view Routine Network Modifications and line conditioning

15 differently. BellSouth's position is that line conditioning is a subset of the

16 Routine Network Modifications defined by the FCC in paragraphs 250, and

17 643 of the *TRO*. The CLECs' position is that the obligations for Routine

18 Network Modifications and line conditioning are separate and independent.

19

20 Q. WHY DOES COMPSOUTH CLAIM THAT LINE CONDITIONING IS NOT

21 A SUBSET OF ROUTINE NETWORK MODIFICATIONS?

22

23 A On Page 59 of his direct testimony, Gillan states that "BellSouth is obligated to

24 condition facilities '... whether or not the incumbent LEC offers advanced

25 services to the end user customer on that copper loop or copper subloop '"

1       Then, he erroneously concludes that “BellSouth need not routinely condition  
2       loop facilities for its own services for it to be obligated to condition facilities  
3       for other CLECs ” It is the latter conclusion with which BellSouth disagrees.  
4       BellSouth is not asserting that it needs to offer advanced services to a specific  
5       customer to have a routine network modification obligation. It is necessary,  
6       however, for BellSouth to routinely perform network modifications for its own  
7       services to have an obligation to perform similar modifications for CLECs

8  
9       In addition, Mr. Gillan points out that the rules for Routine Network  
10       Modifications are in a different section of the rules from the line conditioning  
11       rules. BellSouth does not disagree that there are separately numbered subparts  
12       (or subsections) contained within the federal rules, but both subparts are  
13       included within the overall rubric of the FCC’s “Specific Unbundling  
14       Requirements” at 47 C F R. § 51.319. The *TRO* at paragraphs 250 and 643  
15       explains the relationship between Routine Network Modifications and line  
16       conditioning unbundling requirements. Specifically, in Paragraph 250, the  
17       FCC states, “Line conditioning constitutes a form of Routine Network  
18       Modification ...” Later, in Paragraph 643, the FCC states, “Line Conditioning  
19       is properly seen as a Routine Network Modification .” In both cases, the  
20       phrase “constitutes a form” and the term “properly” are defined as a “subset ”  
21       Stated simply, the FCC clearly identifies BellSouth’s line conditioning  
22       obligation as a subset of BellSouth’s routine network modification obligations

23  
24    Q.   PLEASE RESPOND TO MR. GILLAN’S EXAMPLE ON PAGE 60 THAT  
25       PURPORTS TO ILLUSTRATE THE DIFFERENCE BETWEEN LINE

1           CONDITIONING AND ROUTINE NETWORK MODIFICATIONS.

2  
3    A.    Mr. Gillan states that “to a large extent, BellSouth’s DSL offerings are housed  
4           in remote terminals, located closer to customers.” He continues, “CLECs, on  
5           the other hand, collocate their equipment at the central office and, therefore,  
6           must frequently use longer loops.” Both claims are inaccurate. Like CLECs,  
7           BellSouth started its DSL deployment in central offices, and prefers deploying  
8           in central offices where possible. Within BellSouth’s service territory, there  
9           are a large number of customers that cannot be reached with DSL service from  
10          the central office (by either CLECs or BellSouth). In these situations, it is  
11          necessary for both BellSouth and the CLECs (which some have chosen to do)  
12          to deploy Digital Subscriber Line Access Multiplexers (“DSLAMs”) in remote  
13          terminals to reach customers. In either case, the CLEC and BellSouth are in  
14          the same situation, and must deploy the same equipment to reach the same  
15          customers. As a result, there is no distinction between the DSL service offered  
16          by BellSouth and the DSL service offered by CLECs that would create a  
17          situation where the line conditioning that BellSouth performs for itself would  
18          not also be sufficient for CLECs.

19  
20          Mr. Gillan on Page 60 continues, stating that line conditioning is an “...  
21          obligation that BellSouth must honor *whether or not it would do so for its own*  
22          *customers* .” without any supporting justification for this position.

23  
24          Clearly, CompSouth’s position attempts to read away the FCC’s plain  
25          language that specifies that line conditioning is a subset of Routine Network

1 Modifications, and that as a result, BellSouth's line conditioning obligation is  
2 based entirely on what it would do for its own customers

3

4 *Item 27: What is the appropriate process for establishing a rate, if any, to allow for*  
5 *the cost of routine network modification that is not already recovered in*  
6 *Commission-approved recurring or non-recurring rates? What is the appropriate*  
7 *language, if any, to incorporate into the ICAs?*

8

9 Q. DID COMPSOUTH PROVIDE ANY DIRECT TESTIMONY OR  
10 PROPOSED ICA LANGUAGE ON THIS ISSUE?

11

12 A. No. CompSouth did not provide any direct testimony on this issue, but Mr.  
13 Gillan did propose ICA language that only allows BellSouth to recover costs  
14 for Routine Network Modifications based on the TELRIC rates already  
15 approved by the Authority, even if the Routine Network Modification being  
16 requested was not included in the calculation of that rate Page 60.

17

18 In contrast, BellSouth's position is that for Routine Network Modifications  
19 that have established TELRIC rates approved by this Authority, that the  
20 Authority-approved rates would be used. For Routine Network Modifications  
21 that have not been included in Authority-approved TELRIC rates, BellSouth  
22 proposes that each such situation be handled on an individual case basis, until  
23 such time that the Authority approves a rate for the previously unspecified  
24 Routine Network Modification.

25

1 Q DOES THIS CONCLUDE YOUR TESTIMONY?

2

3 A. Yes.
